

The Spectrum Advisors Preferred Fund Update

Fund Commentary

Equity volumes were low in August, and likely played a role in the choppy price action. The large cap S&P 500 Index pushed to new highs early in the month while breadth lagged, primarily due to weak price action in small caps. Around mid-month, stocks pulled back with small caps having led the way down. The shakeout failed to develop into a deeper correction as speculators stepped in to support the market. This time, small caps led the rally and breadth improved as more sectors and style classes participated. Spectrum Advisors Preferred (SAPEX) began the month with a bullish stance but without the full use of strategic leverage. Positions were reduced further as momentum faltered mid-month. Nimble techniques employed by the Fund then allowed for a quick exposure increase. The expansion in breadth during the late month rebound helped SAPEX to outperform the broader NYSE Index for August.

Portfolio Allocation

	07/31/2021	8/31/2021
Large Cap Equity	74.38%	74.31%
Mid Cap Equity	0.00%	0.00%
Small Cap Equity	24.05%	35.10%
International Equity	0.00%	0.00%
Fixed Income	39.76%	59.47%
Can contain derivatives and/or short positions	138.19%	168.89%

Exposure Allocation (5/31/2021 - 8/31/2021)

SAPEX (Alternative Equity) vs. Sector Indices

The chart above shows how the Fund performed against related sector indices for the past 12 months. The Fund implements various trading models depending on the equity market environment. The equity exposure is split into two pieces: tactical equity exposure and core holding equity exposure which is labeled 'Preferred Advisors' to uphold Spectrum's core philosophy of achieving competitive returns without sacrificing the goal of risk management. The Fund may also add on alternative fixed income exposure. Depending on the current market environment this fixed income exposure can either be used to level out equity volatility or contribute to current equity returns.

Annualized total return performance

As of 8/31/2021	SAPEX	S&P 500 TR Index	60/40 NYSE & Barclays US AGG

Consider these risks before investing: Bond risk, derivatives risk, emerging market risk, foreign investment risk, equity risk, inverse ETF risk, junk bond risk, leverage risk, management risk, market risk, mutual fund and ETF risk, short position risk, small and medium capitalization risk, and turnover risk. There is no guarantee the fund will achieve its investment objective. You can lose money by investing in the fund. Please carefully review the prospectus for detailed information about these risks.

NYSE Composite Index (NYA): measures the performance of all stocks listed on the New York Stock Exchange. It includes more than 1,900 stocks, of which over 1,500 are U.S. companies. Its breadth therefore makes it a much better indicator of market performance than narrow indexes that have far fewer components. The weights of the index constituents are calculated on the basis of their free-float market capitalization. The index itself is calculated on the basis of price return and total return, which includes dividends.

Barclays U.S. AGG: Bond TR Index: measures performance of the total U.S. investment grade bond market. It is a market value-weighted index that tracks the daily price, coupon, pay-downs, and total return performance of fixed-rate, publicly placed, dollar-denominated, and non-convertible investment grade debt issues with at least \$250 million par amount outstanding and with at least one year to final maturity.

S&P TR 500 Index is a capitalization weighted index of 500 stocks representing all major domestic industry groups. The S&P 500 TR assumes the reinvestment of dividends and capital gains. It is not possible to directly invest in any index.

60/40 NYSE Composite/Barclays U.S. AGG. Bond Index: This benchmark gives 60% weight to the NYSE Composite Index and 40% weight to the Barclays U.S. Agg. Bond Index. The NYSE Composite Index (NYA) measures the performance of all stocks listed on the New York Stock Exchange. It includes more than 1,900 stocks, of which over 1,500 are U.S. companies. Its breadth therefore makes it a much better indicator of market performance than narrow indexes that have far fewer components. The weights of the index constituents are calculated on the basis of their free-float market capitalization. The index itself is calculated on the basis of price return and total return, which includes dividends. The Barclays U.S. Aggregate Bond Index measures the underlying index and performance of the total U.S. investment grade bond market. It is a market value-weighted index that tracks the daily price, coupon, pay-downs, and total return performance of fixed-rate, publicly placed, dollar denominated, and non-convertible investment grade debt issues with at least \$250 million per amount outstanding and with at least one year to final maturity.
