

The Spectrum Low Volatility Fund Update

Fund Commentary

The Federal Reserve held interest rates steady at their January FOMC meeting. On the longer end of the curve, rates were volatile during the month as markets reacted to multiple forces, including threats of tariffs against European allies that may oppose President Trump’s aspirations of acquiring Greenland. Outside of treasuries, most other bond sectors traded in tighter ranges, and with less positive momentum than paths in December. One sector exception was ongoing favorable trends in non-US bonds. Exposure within the Spectrum Low Volatility Fund (SVARX) took cues from the loss in momentum while recognizing overall favorable trends by modest reductions to high yield and securitized credit as well as preferred stock holdings and investments in the Bond/Other category. Emerging/Global bonds were the only category with net increases. The overall technical environment for the bond market appears relatively stable, as economic activity remains robust but not enough to create signs of accelerated inflationary pressures.

The chart above shows how the Fund performed against related sector indices for the past 12 months. The Fund focuses on domestic fixed income and credit markets, but can invest globally when prudent. The management team navigates the various bond classes and their specific characteristics. Various bond classes tend to move in different directions from each other, as some tend to perform better when there is economic growth while other classes perform better during times of heightened instability. The Fund’s holdings and exposure can shift on a daily basis allowing it to be nimble. Spectrum’s core philosophy is to achieve competitive returns without sacrificing the goal of risk
