

The Spectrum Active Advantage Fund Update

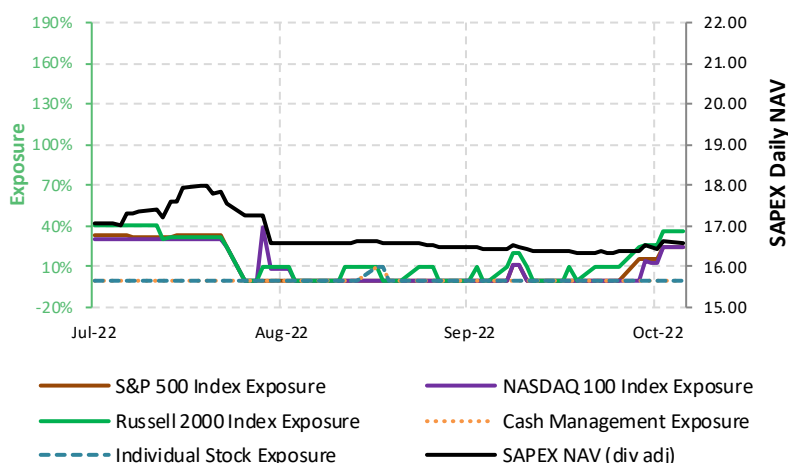

Fund Commentary

Equity weakness in the first half of October led to the S&P 500 and the tech heavy NASDAQ breaking below their June and September 2022 lows. This flushed sellers and allowed for equities to recover a modest portion of lost ground. Major trends are negative in most sectors with only a few exceptions, energy being one. That said, volatility and breadth improved, though not to levels normally associated with bull markets. Actions within the Spectrum Active Advantage Fund (SAPEX) reflected the modest technical improvements within an otherwise negative macro trend environment. Smaller tactical trades took place while generally maintaining a defensive leaning until further technical evidence comes to light.

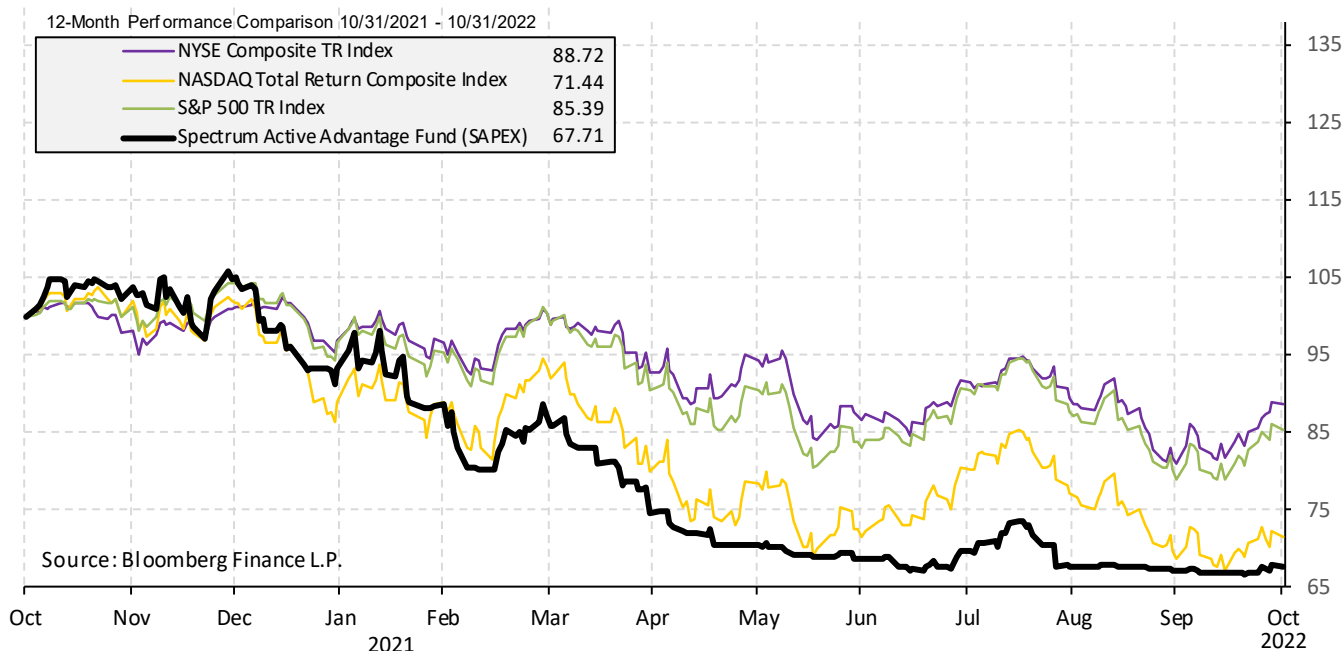

Portfolio Allocation

	09/30/2022	10/31/2022
NASDAQ 100 Index	0.00%	24.16%
S&P 500 Index	0.00%	25.04%
Russell 2000 Index	0.00%	35.85%
Individual Stocks	0.00%	0.00%
Cash Management	0.00%	0.00%
<small>Can contain derivatives and/or short positions</small>	0.00%	85.05%

Exposure Allocation (7/31/2022 - 10/31/2022)

SAPEX (Equity) vs. Sector Indices

The chart above shows how the Fund performed against related sector indices for the past 12 months. The Fund implements various trading models depending on the equity market environment. The Fund may also add on alternative fixed income exposure to manage cash efficiently.

Consider these risks before investing: Bond risk, derivatives risk, emerging market risk, foreign investment risk, equity risk, inverse ETF risk, junk bond risk, leverage risk, management risk, market risk, mutual fund and ETF risk, short position risk, small and medium capitalization risk, and turnover risk. There is no guarantee the fund will achieve its investment objective. You can lose money by investing in the fund. Please carefully review the prospectus for detailed information about these risks.

NYSE Composite Index (NYA): measures the performance of all stocks listed on the New York Stock Exchange. It includes more than 1,900 stocks, of which over 1,500 are U.S. companies. Its breadth therefore makes it a much better indicator of market performance than narrow indexes that have far fewer components. The weights of the index constituents are calculated on the basis of their free-float market capitalization. The index itself is calculated on the basis of price return and total return, which includes dividends.

S&P TR 500 Index is a capitalization weighted index of 500 stocks representing all major domestic industry groups. The S&P 500 TR assumes the reinvestment of dividends and capital gains. It is not possible to directly invest in any index.

NASDAQ Composite TR Index is a broad-based capitalization- weighted index of stocks in all three NASDAQ tiers: Global Select, Global Market, and Capital Market.
