

The Spectrum Active Advantage Fund Update

Fund Commentary

Equity markets began the month with sharp losses. The media pointed fingers to the unwinding of the Yen “carry trade” that led to portfolio adjustments, primarily in “Risk-On” investments with the technology sector feeling the brunt of the selling. Some traditionally defensive sectors were spared but the major indexes had compromises to their chart patterns with many breaking below commonly watched levels such as 50-day moving averages. Oversold levels and the high levels of volatility were seen by speculative traders as opportunities to enter what, in most cases, are still macro uptrends if defined by rising 200-day moving averages. The Spectrum Active Advantage (SAPEX) fund managed the volatility through tactical exposure and beta adjustment while attempting to balance macro uptrend participation against short-term headwinds.

Portfolio Allocation

	07/31/2024	8/31/2024
NASDAQ 100 Index	14.03%	31.45%
S&P 500 Index	44.24%	49.28%
Russell 2000 Index	13.96%	10.18%
Equity Other	39.39%	19.40%
Cash Management	7.62%	7.07%
	119.24%	117.39%

Can contain derivatives and/or short positions

Exposure Allocation (5/31/2024 - 8/31/2024)

SAPEX (Equity) vs. Sector Indices

The chart above shows how the Fund performed against related sector indices for the past 12 months. The Fund implements various trading models depending on the equity market environment. The Fund may also add on alternative fixed income exposure to manage cash efficiently.

Consider these risks before investing: Bond risk, derivatives risk, emerging market risk, foreign investment risk, equity risk, inverse ETF risk, junk bond risk, leverage risk, management risk, market risk, mutual fund and ETF risk, short position risk, small and medium capitalization risk, and turnover risk. There is no guarantee the fund will achieve its investment objective. You can lose money by investing in the fund. Please carefully review the prospectus for detailed information about these risks.

NYSE Composite TR Index (NYATR): measures the performance of all stocks listed on the New York Stock Exchange. It includes more than 1,900 stocks, of which over 1,500 are U.S. companies. Its breadth therefore makes it a much better indicator of market performance than narrow indexes that have far fewer components. The weights of the index constituents are calculated on the basis of their free-float market capitalization. The index itself is calculated on the basis of price return and total return, which includes dividends.

S&P 500 TR Index is a capitalization weighted index of 500 stocks representing all major domestic industry groups. The S&P 500 TR assumes the reinvestment of dividends and capital gains. It is not possible to directly invest in any index.
