

## The Spectrum Active Advantage Fund Update

### Fund Commentary

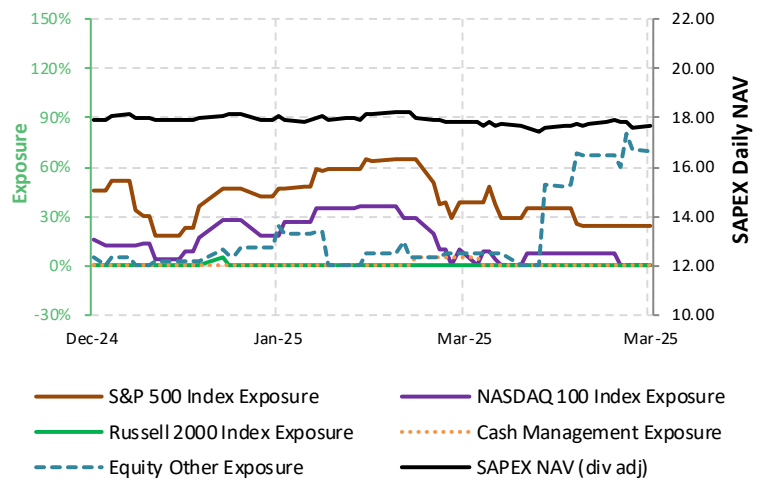

Equities weakened in March as investors reacted to a volley of changing parameters surrounding trade tariffs. The Federal Reserve offered little guidance, as mixed messages from economic reports supported both sides of the debate for their interest rate policy. This led to the Fed’s Chairman Powell stating they are in no hurry to change rates though it is commonly believed several rate cuts are slated for 2025. The major indexes generally remained below key technical levels that chart watchers often use as an input to define challenging market environments. Additional poor technical inputs such as breadth continue to be weak. SAPEX entered March already in a defensive posture, leaning more toward larger caps, including investments with traditionally defensive/lower beta characteristics. Mutual fund investments were added that use various hedging strategies such as Long/Short. Despite SAPEX’s decline in March, the investment mix displayed outperformance versus primary benchmarks and market neutral for core positions within the fund.

### Portfolio Allocation

	02/28/2025	3/31/2025
NASDAQ 100 Index	9.73%	0.00%
S&P 500 Index	38.66%	24.61%
Russell 2000 Index	0.00%	0.00%
Equity Other	7.11%	70.06%
Cash Management	4.79%	0.00%
	<b>60.29%</b>	<b>94.67%</b>

Can contain derivatives and/or short positions

### Exposure Allocation (12/31/2024 - 3/31/2025)

### SAPEX (Equity) vs. Sector Indices

The chart above shows how the Fund performed against related sector indices for the past 12 months. The Fund implements various trading models depending on the equity market environment. The Fund may also add on alternative fixed income exposure to manage cash efficiently.

**Consider these risks before investing:** Bond risk, derivatives risk, emerging market risk, foreign investment risk, equity risk, inverse ETF risk, junk bond risk, leverage risk, management risk, market risk, mutual fund and ETF risk, short position risk, small and medium capitalization risk, and turnover risk. There is no guarantee the fund will achieve its investment objective. You can lose money by investing in the fund. Please carefully review the prospectus for detailed information about these risks.

NYSE Composite TR Index (NYATR): measures the performance of all stocks listed on the New York Stock Exchange. It includes more than 1,900 stocks, of which over 1,500 are U.S. companies. Its breadth therefore makes it a much better indicator of market performance than narrow indexes that have far fewer components. The weights of the index constituents are calculated on the basis of their free-float market capitalization. The index itself is calculated on the basis of price return and total return, which includes dividends.

S&P 500 TR Index is a capitalization weighted index of 500 stocks representing all major domestic industry groups. The S&P 500 TR assumes the reinvestment of dividends and capital gains. It is not possible to directly invest in any index.
